CALCULATION OF IMPULSE-CIRCUITS. [1962] 11p. (figs. formulae tables refs. omitted).
Available on loan from SLA 62-20346

Trans. of Archiv für Elektrotechnik (Germany) 1953, v. 41 [no. 1] p. 18-27.

DESCRIPTORS: *Circuits, *Wiring diagrams, Mathematical analysis, Voltage.

There is shown a way for the joint calculation of a periodical impulse waves which are produced by a CLR circuit or a combined CR circuit (without L). The clarity there is achieved by the introduction of a new coefficient of the aperiodicity. For those analytical functions whose numerical evaluation can only be carried out in a time-consuming manner or not directly, there have been constructed auxiliary curves. Finally, the calculating procedure is illustrated with the help of some practical examples. (Author)
